

Ontario Court of Appeal rules against plaintiffs in trilogy of privacy class actions

02 décembre 2022

In a highly anticipated trilogy of privacy class action certification appeals, the Ontario Court of Appeal refused to certify three class actions based on the tort of intrusion upon seclusion. In [Oswianik v. Equifax Canada Co.](#), [Obodo v. Trans Union of Canada, Inc.](#), and [Winder v. Marriott International, Inc.](#), the Ontario Court of Appeal held that defendants who collect and store personal information of individuals in databases (Database Defendants) cannot be held liable under the tort of intrusion upon seclusion when cyber criminals illegally access or steal that information.

In recent years, claimants have attempted to expand the tort's application to cyber security and privacy breaches and sought to have class actions certified, seeking aggregate assessment of the moral or symbolic damages that are available for intrusion upon seclusion. This decision trilogy from the Court of Appeal is likely to slow this trend. However, as noted by the Court of Appeal, Database Defendants could remain liable in negligence where their failure to take adequate steps to protect information causes actual - as opposed to symbolic - damages.

Background

The Court of Appeal first codified the tort of intrusion upon seclusion in **Jones v. Tsige , 2012 ONCA 32** . This case involved an individual action brought against a bank employee who repeatedly accessed and examined the financial records of her ex-husband's new partner. Finding that the facts presented before him would otherwise not be actionable, Justice Sharpe concluded the situation "cried out for a remedy," adopting the tort of inclusion upon seclusion from the American Restatement (Second) of Torts.

In Jones, the Court set out the three elements of the tort:

1. Intentional or reckless conduct by the defendant;
2. **An invasion, without lawful justification, into the plaintiff's private affairs or concerns;** and
3. That a reasonable person would regard the invasion as highly offensive, causing distress, humiliation or anguish.

Notably, proof of harm was not listed as an element of the tort - a welcome development for plaintiffs (and class counsel) who must ordinarily prove actual damages under other tort claims like negligence or breach of contract. However, in *Jones* the Ontario Court of Appeal noted the tort's recognition was not meant to "open the floodgates" of privacy litigation.¹ Justice Sharpe limited its application to deliberate and significant invasions of personal privacy that can be described as highly offensive in the eyes of a reasonable person.²

In the decade following *Jones v. Tsige*, courts have had to clarify the scope of the tort. At the certification stage, many courts found that it was a stretch to say that a Database Defendant's failure to take adequate steps to protect personal information satisfied the "recklessness" requirement of the tort of intrusion upon seclusion. At the same time, courts were reluctant to refuse to certify such claims in light of the low legal threshold applicable to certification motions.

The three cases: Owsianik, Odobo and Marriott International

Owsianik, Odobo and Marriott International all involved privacy class action certification motions against Database Defendants for the tort of intrusion upon seclusion following large-scale data breaches by third-party cyber criminals.

In *Owsianik*, the representative plaintiff pleaded that Equifax's "reckless" data management practices constituted an intrusion that would be highly offensive to a reasonable person.³ A majority of the Court disagreed, holding the tort "has nothing to do with the database defendant."⁴ Absent an actual intrusion, the majority said other categories of liability could adequately control the behaviour of the defendant - namely, the tort of negligence.⁵ While the majority agreed that *Jones* might not be the final word on the tort of inclusion upon seclusion, they nonetheless declined to extend liability to non-intruders as doing so risked opening the floodgates the court in *Jones* intended be left firmly closed.⁶ The decision included a strong dissent, with reasons that are considerably longer than those of the majority.

In *Obodo*, the Court applied *Owsianik* as binding authority and rejected certification for intrusion upon seclusion on the basis that the tort has nothing to do with a Database Defendant.⁷

In *Winder*, the claimants attempted to argue that Marriott's behaviour in obtaining the Class Members' personal information deceptively by false premises made it a "reckless" intruder.⁸ While Justice Perell found that, at most, Marriott's behaviour might have rendered it a "constructive" intruder, he ultimately determined on policy grounds that the tort of inclusion upon seclusion should have a narrow scope of application. Referencing the *Jones* decision, Justice Perell concluded that extending the tort of intrusion upon seclusion to "constructive" intruders would open the floodgates of litigation and assign liability to conduct that other causes of action already adequately control, such as negligence or breach of contract.⁹ Finding no gap in the law of privacy that would be filled by extending the tort to the Database Defendant who suffered the cyber attack, Justice Perell held the tort of intrusion upon seclusion is restricted to defendants who are "real" intruders.¹⁰

The trilogy

The Court of Appeal heard the three cases consecutively in June 2022, and released its decisions together in November 2022.

The Court of Appeal agreed with the decision of the majority in *Oswianik*. The Court of Appeal refused to extend liability under the tort of intrusion upon seclusion to the Database Defendants for failure to take steps to protect databases of personal information. In doing so, the Court declined to certify the class actions on the basis that the plaintiffs had not pled viable intrusion upon seclusion claims.

Although the *Jones v. Tsige* decision recognized that the defendant's conduct can be intentional or reckless to satisfy the first element of the tort, the trilogy clarifies that the prohibited state of mind, whether the intention or recklessness, must relate to the act of **the invasion. The defendant must either intend to invade the plaintiffs' privacy, or the defendant must be reckless about whether his or her conduct will result in the defendant invading the plaintiffs' privacy. The Court of Appeal wrote that "[T]he defendant's recklessness with respect to the consequences of some other conduct, for example the storage of the information, cannot fix the defendant with liability for invading the plaintiffs' privacy."**

In the Court's view, holding the Database Defendants liable for the intentional torts of unknown cyber criminals would have created a new and potentially very broad liability for intentional torts and go beyond the incremental change to the common law that *Jones v. Tsige* sought to bring about.

Finally, the Court of Appeal rejected the argument that the plaintiffs were left without a remedy. The plaintiffs could pursue claims against Database Defendants whose negligent storage of information allows cyber criminals to access or steal that information if the plaintiffs could prove actual damages.

Takeaways

In this trilogy, the Court of Appeal refused to expand the scope of the tort of intrusion upon seclusion and confirmed Database Defendants cannot be held liable under this new tort when third party cyber criminals illegally access or steal personal information. It is not yet known if the plaintiffs will seek leave to appeal the decision to the Supreme Court of Canada.

The trilogy of cases is part of a broader trend of decisions in 2021 and 2022 that are favourable to defendants and that limit the scope of tort of intrusion upon seclusion. In narrowing the circumstances in which symbolic damages are available for breaches of privacy, the decision has also made the law of Ontario more consistent with that of Québec.¹¹

Previously, plaintiffs had an advantage in the certification process and, as a result, in any settlement negotiations. That was because claims for intrusion upon seclusion could potentially be well suited for class-wide determination given that damages do not require proof of any actual pecuniary loss and can be awarded on a "symbolic" or "moral" basis. With this trilogy, plaintiffs may have lost that advantage.

In the future, plaintiffs who wish to claim against Database Defendants following cyber attacks will need to seek remedies under contract, negligence or statute, which **generally require proof of economic harm or a “serious and prolonged mental injury.”**¹²

To the extent that existing common law remedies do not adequately encourage Database Defendants to take all reasonable steps to protect the private information under their control, the Court of Appeal invited Parliament and provincial legislatures to provide more effective remedies against Database Defendants who do not take proper steps to do so.

Given that Parliament recently completed its second reading of Bill C-27, a remedy for individuals who suffer damages related to the negligent storage of information may arrive sooner rather than later. This bill introduced the Consumer Privacy Protection Act (CPPA) and a private right of action for those affected by contraventions of the CPPA. **As is the case under Canada’s current privacy legislation, the CPPA requires** organizations to protect personal information in a way proportionate to the sensitivity of the information. Via this new right of action, plaintiffs could claim damages for loss or **injury resulting from a Database Defendant’s act or omission.** Given this potential legislative development, it remains to be seen how courts will treat cases like those in this trilogy, and to what degree it will hold Database Defendants liable.

BLG | Vos avocats au Canada

Borden Ladner Gervais S.E.N.C.R.L., S.R.L. (BLG) est le plus grand cabinet d'avocats canadien véritablement multiservices. À ce titre, il offre des conseils juridiques pratiques à des clients d'ici et d'ailleurs dans plus de domaines et de secteurs que tout autre cabinet canadien. Comptant plus de 800 avocats, agents de propriété intellectuelle et autres professionnels, BLG répond aux besoins juridiques d'entreprises et d'institutions au pays comme à l'étranger pour ce qui touche les fusions et acquisitions, les marchés financiers, les différends et le financement ou encore l'enregistrement de brevets et de marques de commerce.
